AM100 Series
User Guide
Safety Precautions

Ursalink will not shoulder responsibility for any loss or damage resulting from not following the instructions of this operating guide.

- The device must not be disassembled or remodeled in any way.
- Do not place the device outdoors where the temperature is below/above operating range. Do not place the device close to objects with naked flames, heat source (oven or sunlight), cold source, liquid and extreme temperature changes.
- The device is not intended to be used as a reference sensor, and Ursalink will not shoulder responsibility for any damage which may result from inaccurate readings.
- The battery should be removed from the device if it is not to be used for an extended period. Otherwise, the battery might leak and damage the device. Never leave a discharged battery in the battery compartment.
- The device must never be subjected to shocks or impacts.
- Do not clean the device with detergents or solvents such as benzene or alcohol. To clean the device, wipe with a soft moistened cloth. Use another soft, dry cloth to wipe dry.

Declaration of Conformity

Ursalink AM100 series is in conformity with the essential requirements and other relevant provisions of the CE, FCC, and RoHS.

1. Overview

1.1 Description

AM100 series is a compact indoor ambience monitoring sensor including motion, humidity, temperature, light, TVOC, CO2, barometric pressure for wireless LoRa network. AM100 series is a battery powered device and is designed to be wall-mounted. It is equipped with NFC (Near Field Communication) and can easily be configured via a smartphone or a PC software. Sensor data are transmitted in real-time using standard LoRaWAN protocol. LoRaWAN enables encrypted radio transmissions over long distance while consuming very little power. The user can obtain sensor data and view the trend of data change through Ursalink Cloud or through the user’s own Network Server.

1.2 Features

- Robust LoRa connectivity for indoor or HVAC environments
- Integrated multiple sensors like temperature, humidity, light, air quality, etc.
- Easy configuration via NFC
- Visual display via E-Ink screen
- Standard LoRaWAN support
- Ursalink Cloud compliant
- Low power consumption (about 1 year battery life)
- Standard AA alkaline battery

2.2 Product Overview

Front Panel:
1. E-ink screen
2. NFC Area
3. LoRa Antenna (Internal)
4. PIR Sensor
5. Light Sensor
3. Power Supply

3.1 Battery Installation
Remove the battery cover and install two new AA/LR6 batteries. Batteries can be replaced on the fly.

3.2 External Power Supply
AM100 series can be powered by type-C USB port (5V, 100mA). When battery and external power are both installed, external power will power the device first.
Note: External power can’t be used for charging battery.

4. Sensor Installation

4.1 PIR Detection Range

There should not be any isolates or barriers in PIR detection range.

4.2 Installation Note

In order to ensure the best detection and LoRaWAN communication effect, it is recommended to install AM100 series as follows:

- There should not be any isolates or barriers in PIR and light detection range.
- Do not mount the device where the temperature is below/above operating range and temperature varies greatly.
- Stay far away from any heat source or cold source like oven, refrigerator.
- Do not mount the device close to where airflow varies greatly like windows, vent, fan and air conditioner.
- Do not mount the device upside down.
- Do not place the device right to the window or door. If you have to, you’d better pull the curtain.
- It is recommended to install at least 1.5m high from floor.
4.3 Wall Mounting

1. Attach the mounting sticker to the wall.
2. Mark the wall where the two mounting holes are according to the sticker’s mark (around 88mm).
   **Note:** The connecting line of two holes must be a horizontal line.
3. Drive two screws into wall at the marks using screw driver.
4. Mount the device on the wall.

5. Turn ON/OFF the Sensor

AM100 series can be turned ON/OFF via smartphone or computer with NFC (Near Field Communication) or button. Select one of following methods to turn on/off the device.
   **Note:** When AM100/AM102 is off, the screen statically displays the following information which will not consume power.
5.1 Turn ON/OFF via Smartphone APP

1. Download Ursalink configuration APP “Toolbox” and install it on your smartphone. The smartphone must support NFC.
2. Enable NFC on the smartphone and open the APP.
3. Attach the smartphone with NFC area to the device.
   **Note:** Ensure the location of your smartphone NFC area and it is recommended to take off phone case before using NFC.

4. Device information will be shown on the APP.
5. Switch the button of Device Status to turn on or off the device.

6. Enter password (default password: 123456) and wait a few seconds until APP shows a success prompt.
   **Note:** Keep the two devices close together and do not move them in order that you can get the best connectivity as possible when turning on or off via NFC. No response can be caused by long distance, wrong location or rapid movement.
5.2 Turn ON/OFF via PC Software

1. Download Ursalink configuration software “Toolbox” and open the software.
2. Connect NFC reader to computer and attach the device to NFC reader.
3. Select type as NFC and serial port of NFC reader, then click “save”.

4. Device information will be shown on the software.
5. Click “Power On” to turn on the device or “Power Off” to turn off the device.

6. Enter password (Default password: 123456) and click “Enter” to change device status.

5.3 Turn ON/OFF via Button

Press and hold on the power button on the back panel until the screen change status (about 3-5s) to turn on or off the device.

Press and hold on the power button on the back panel for over 10s to reset the device to factory default.

6. Sensor Configuration

Ursalink AM100 series sensors can be monitored and configured via NFC technology. In order to protect the security of sensor, password validation is required when turning on/off the sensor or changing configuration. Select one of the following ways to configure AM sensors.

6.1 Configuration via Smartphone APP

Make sure Ursalink Toolbox APP is downloaded and installed on your smartphone.
6.1.1 Read Configuration

1. Open APP “Toolbox” and click “Read” to read current data of device.

2. Attach the smartphone with NFC area to the device until the APP shows a success prompt.

**Note:** Read failure can be caused by long distance, wrong location or rapid movement.

6.1.2 Write Configuration

1. Open APP “Toolbox” and go to “Settings” page.
2. Change parameters as required and click “Write”.
3. Enter password (default password: 123456).
4. Attach the smartphone with NFC area to the device and wait a few seconds until APP shows a success prompt. The device will automatically re-join the network if LoRaWAN parameters are changed.

**Note:** Write failure can be caused by long distance, wrong location, or rapid movement.

### 6.1.3 Template Settings

Template settings are used for easy and quick device configuration in bulk.

**Note:** Template function is allowed only for sensors with the same model and LoRa frequency band.

1. Go to “Template” page of APP and save current settings as a template.
2. Attach the smartphone with NFC area to another device.
3. Select the template file from Toolbox and click “Write”.
4. Enter password of this device and keep the two devices close until the APP shows a success prompt.
5. Slide the template item left to edit or delete the template.

6.2 Configuration via PC
Make sure “Toolbox” is downloaded on your computer.

6.2.1 Read Configuration
1. Open software “Toolbox” and click “Read” to read current information of device.

2. Attach the device to the NFC reader until Toolbox shows “success”.

Success
Note: Failing to read can be caused by long distance, wrong location, or rapid movement.

6.2.2 Write Configuration

1. Go to “Settings” page to change parameters as requirements and click “save”.
2. Click “Write” and enter the correct password (default password: 123456).
3. Press Enter key to write and attach the device close to NFC reader until “Write” button disappear. The device will automatically re-join the network if LoRaWAN parameters are changed.

Note: Keep the two devices close and don’t move them in order that you can get the best connectivity as possible when writing data via NFC. Bad connection can be caused by long distance, wrong location, or rapid movement.

6.2.3 Upgrade

6.2.3.1 Upgrade Locally
1. Download AM firmware to your computer.
2. Go to “Maintenance -> Upgrade” page of Toolbox.
3. Click “Browse” and select the firmware from computer.
4. Click “Upgrade” and enter password of the device.
5. Press Enter key to start upgrade. Device will check if the firmware is correct. If it is correct, firmware will be imported to the device to upgrade.
**Note:** Keep the two devices close and don’t move them in order that you can get the best connectivity as possible when upgrading. Failing to upgrade can be caused by long distance, wrong location, or rapid movement.

**6.2.3.2 FOTA**
1. Make sure your computer can access the Internet.
2. Click “Check for Updates” to search for the latest firmware via computer Internet and upgrade.

**Note:** Keep the two devices close and don’t move them in order that you can get the best connectivity as possible when upgrading. Failing to upgrade can be caused by long distance, wrong location, or rapid movement.

**6.2.4 Template and Reset**

**6.2.4.1 Template Configuration**
1. Go to “Maintenance -> Template and Reset” page of Toolbox.
2. Click “Export” to save the current settings as a template.
3. Click “Browse” to select the correct template from computer.
4. Click “Import” to import the template to the device.

6.2.4.2 Reset
Click the “Reset” to reset the setting to factory default.

</tr>
</tbody>
</table>
### Confirmed Mode

After sending the attribute/data/battery packets to the network server, the device will resend these packets if it does not receive ACK bit from the Network Server.

**Note:** If the device doesn’t receive ACK for a long time, the device will resend confirmed packets 3 times at most. However, the device will resend attribute package all the time.

### 7.1.3 Channel Settings

**Location:**
Ursalink ToolBox (PC): LoRaWAN Settings → Channel
Ursalink ToolBox (APP): Device → Settings → LoRaWAN Settings

**Note:** Make sure the LoRa channel configuration of AM100 series matches the LoRaWAN gateway.
LoRa frequency configuration is as follows if the sensor LoRa frequency is one of EU433/EU868/RU864/IN865/AS923/KR920:

Enter the index of the channel to be enabled in the input box, separated by commas.

**Example:**
- 1, 40: Enable Channel 1 and Channel 40
- 1-40: Enable Channel 1 to Channel 40
- 1-40, 60: Enable Channel 1 to Channel 40 and Channel 60
- All: Enable all channels
- Null: Indicates that all channels are disabled

**Note:**
For US915:
64 channels numbered 0 to 63 utilize LoRa 125 kHz BW starting at 902.3 MHz and incrementing linearly by 0.2 MHz to 914.9.
8 channels numbered 64 to 71 utilize LoRa 500 kHz BW starting at 903.0 MHz and incrementing linearly by 1.6 MHz to 914.2.
For AU915:
64 channels numbered 0 to 63 utilize LoRa 125 kHz BW starting at 915.2 MHz and incrementing linearly by 0.2 MHz to 927.8.
8 channels numbered 64 to 71 utilize LoRa 500 kHz BW starting at 915.9 MHz and incrementing linearly by 1.6 MHz to 927.1.
For CN470:
80 channels numbered 0 to 79 utilize LoRa 125 kHz BW starting at 470.3 MHz and incrementing linearly by 0.2 MHz to 486.1.
16 channels numbered 80 to 95 utilize LoRa 125 kHz BW starting at 486.3 MHz and incrementing linearly by 1.6 MHz to 489.3.

<tr>
<td></td>
<td><strong>Note:</strong> only one decimal is allowed.</td>
<td></td>
</tr>
</tbody>
</table>
Humidity Calibration | Enter the calibration value for humidity.  
**Note:** only integer is allowed. | Null
Illumination Calibration | Enter the calibration value for illumination.  
**Note:** only integer is allowed. | Null
TVOC Calibration (AM102 Only) | Enter the calibration value for TVOC.  
**Note:** only integer is allowed. | Null
CO2 Calibration (AM102 Only) | Enter the calibration value for CO₂.  
**Note:** only integer is allowed. | Null
Barometric Pressure Calibration (AM102 Only) | Enter the calibration value for barometric pressure. | Null

**Note:** Calibration value should be re-configured if you re-start one item collection in Data Collection page.

### 7.2.3 Threshold

**Location:**
Ursalink ToolBox (PC): Device Settings → Threshold Settings
Ursalink ToolBox (APP): Device → Settings → Threshold Settings

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>Temperature</td>
<td>Enable: The device will send the latest temperature value to Network Server if the temperature goes above/below temperature thresholds.</td>
<td>Disabled</td>
</tr>
<tr>
<td>Over</td>
<td>The maximum temperature threshold.</td>
<td>Null</td>
</tr>
<tr>
<td>Below</td>
<td>The minimum temperature threshold.</td>
<td>Null</td>
</tr>
</tbody>
</table>

**Example:** Set the "Lockout Time" for 10s, "Duration" for 5s.
The device will report the detected value immediately when the value reaches the threshold and last for 5s. After that, the device will check the detected value every 10s, and report the value again if it reaches the threshold and last for 5s.

### 8. Sensor Management via Ursalink Cloud

Ursalink cloud is a comprehensive platform that provides multiple services including device remote management and data visualization with the easiest operation procedures.

#### 8.1 Ursalink Cloud Registration

Register and log in Ursalink Cloud.
Ursalink Cloud URL: [https://cloud.ursalink.com/login.html](https://cloud.ursalink.com/login.html)
8.2 Add a Ursalink LoRaWAN Gateway

1. Enable “Ursalink” type network server and “Ursalink Cloud” mode in gateway web GUI.

Note: Ensure gateway has accessed the Internet.
2. Go to “My Devices->Gateway” of Ursalink Cloud and click “Add” to add gateway to Ursalink Cloud via SN.

3. Check if gateway is online in Ursalink Cloud.

8.3 Add AM100/AM102 to Cloud

1. Go to “Device->My Devices” and click “Add Device”. Fill in the SN of AM100/AM102 and select associated gateway.

2. After AM100/AM102 is connected to Ursalink Cloud, Click or “History Data” to check the data on Ursalink cloud.
3. Go to “Dashboard” page to add widgets to the dashboard.
